6.1 Services

6.1.1 Telecommunications

- VSAT deployment (C, Ku, Ka bands)
- GSM/3G/4G LTE BTS & Microwave system deployment
- RF Optimization, Drive Testing and KPI Monitoring
- Network Infrastructure deployment (VoIP, LAN/WLAN, Server infrastructure)
- Installation of Turnkey tower & mast solutions
- Installation of Security, alarms and lightening systems

- Surveillance Camera/CCTV installation

6.1.2 Energy

- Design & installations of Renewable Energy/Solar PV solutions
- Installations of Power Backup solutions

6.1.3 Specialized Trainings

- VSAT Systems Installations, commissioning and Maintenance
- Solar PV System installation, commissioning and Maintenance
- Network Infrastructure, commissioning and Maintenance

6.1.4 General Consulting & Supply of Energy/ICT infrastructure products

- Solar System
- IT/Telecom Infrastructure System
- VSAT System

6.2 Products

6.2.1 TV Solution

Direct-to-Home (DTH) broadcast of SDTV, HDTV and UHD TV contents with up to date compression standards in C and Ku band. A bouquet can be created with many channels and uplink within the satellite footprint or in hybrid mode with terrestrial internet.

6.2.2 VSAT Solution

Flexible options are available for end to end internet connectivity from dedicated to shared services using SCPC or TDM/TDMA technologies with throughput up to 200Mbps. Contention rates can be adjustable and scaled up to 1:20 in C or Ku band with various antenna sizes after link budget analysis.

6.3 GSM Backhauling Solution

With limitations of optical fiber and terrestrial microwave in certain areas, Satellite backhaul becomes the ideal solution to extend the GSM traffic of Mobile Network Operators to provide full connectivity to their clients.
